

ADVANCED SOFTENING MATERIAL for problem water

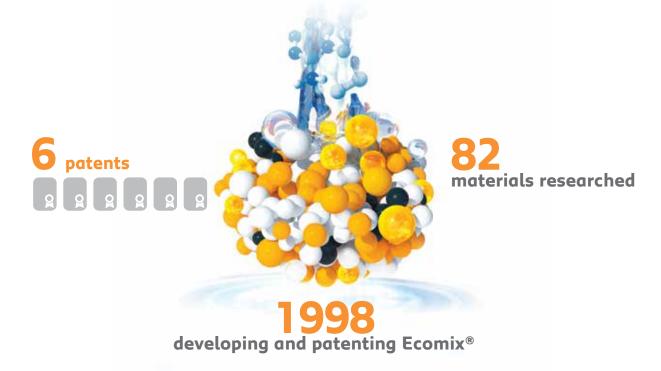

SIMPLE SOLUTION FOR 5 PROBLEMS

hardness
iron
manganese
natural organic matter
ammonium

Used by water treatment companies globally since 1998

WHAT ECOMIX® IS

Filtration material for problem water with iron compounds. Contains five ingredients of various origin, including two patented materials

Ecomix[®] purifies water from:

hardness
iron
manganese
natural organic matter (including tannins)
ammonium

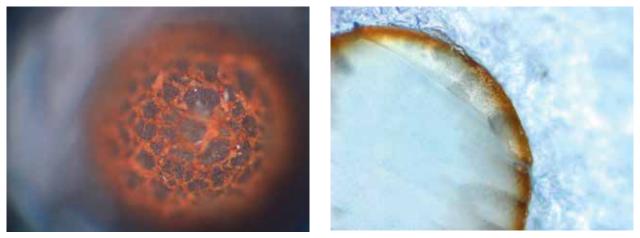

Certified in compliance with the NSF/ANSI 44/61/372 standards

Delivered and loaded as homogeneous media **Classifies in five strata** Inert layer on first regeneration removes adsorbed iron oxides **FerroSorb Regenerates with** removes iron and common softener manganese compounds salt HumiSorb removes natural organic matter and metalorganic impurities Cation exchange resin softens water Quartz sand ensures uniform flow across the vessel

HOW ECOMIX® WORKS

REMOVING IRON AND MANGANESE

FerroSorb is a proprietary sorption material for iron and manganese removal

Dissected FerroSorb bead

Mechanism of iron removal ADSORPTION – OXIDATION – ACTIVE LAYER FORMATION – AUTOCATALYTIC OXIDATION

This chain works to remove iron in dissolved, oxide, organic, and colloid forms.

Surface layer of FerroSorb contains active sites for sorption of manganese.

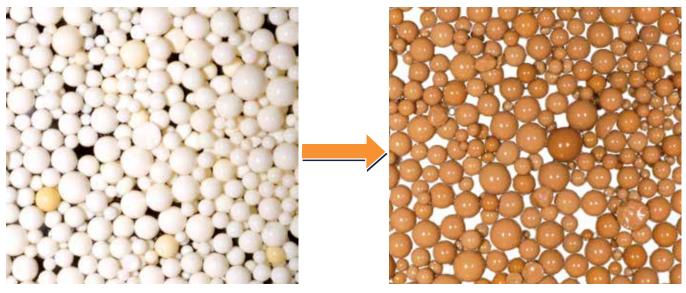

Ecomix works best with raw wellwater supplied directly to Ecomix unit.

Oxidative pre-treatment is unnecessary and should be avoided.

REMOVING ORGANIC MATTER

HumiSorb is a proprietary sorption material for removal of natural organic matter (reduces color and tannins)

Organic compounds are removed by the mechanism of hydrophobic and electrostatic interactions.

Fresh HumiSorb beads

HumiSorb beads after service

ECOMIX® REGENERATION

Ecomix[®] regenerates with the same steps as normal softeners: backwash, brine, rinse.

Calcium and magnesium ions are displaced from the cation exchange resin matrix with sodium ions.

Iron and manganese compounds are removed by surface friction of FerroSorb beads in fluidized bed during backwash.

HumiSorb exhibits a reversible mechanism of sorption of organic molecules, and is regenerated with chloride ions.

ECOMIX® EFFICIENCY AND LIMITATIONS

Raw water quality requirements and efficiency of purification

	Raw water limitations	Max. efficiency, %			
Hardness	45 gpg	97			
Iron	15 ppm	98			
Manganese	3 ppm	98			
TOC* (including tannins)	17 ppm C	80			
Ammonium	4 ppm	90			

*TOC (total organic carbon) is used as a measure of natural organic matter content

OPERATING CONDITIONS:

pH 5 – 9 No limits on influent hydrogen sulfide or anion content Active chlorine \leq 1 ppm TDS \leq 4000 ppm

ECOMIX® TECHNICAL SPECIFICATIONS

When designing Ecomix[®] units, refer to the following figures:

Ion-exchange capacity of ECOMIX – 13 000 grain/cu.ft.

Parameter	Value				
Service flow rate	8-10 gpm/ft ²				
Backwash flow rate	4-6 gpm/ft ²				
Brine (slow rinse) flow rate	1.2-2.0 gpm/ft ²				
Minimum bed depth	20 inches				
Recommended bed depth	30 inches				
Freeboard	40% or more				
Salt consumption	6.3 lbs/ft ³				
Brine concentration	8-10%				
Water consumption per regeneration	below 75 gallon/ft³				

COMMONLY USED VESSELS

Size of vessel	1035	1054	1252	1354	1465	1665	2162
Ecomix [®] volume, bags*	1.0	1.5	2.0	2.5	3.0	4.0	6.0
Service flow rate, gpm	5.7	5.7	8.0	10.0	11.0	14.5	24.3
System capacity, grains	11 500	17 000	23 000	28 500	34 500	46 000	69 000
Salt per regeneration, lbs.	5.5	8.4	11.0	13.7	16.5	22.0	33.0
Backwash flow rate, gpm	2.6	2.6	4.0	4.9	5.3	7.1	11.9

*Ecomix is supplied in two size types:

• Bag — 0.88 cu. ft. (25L)

• Half bag — 0.42 cu. ft. (12L)

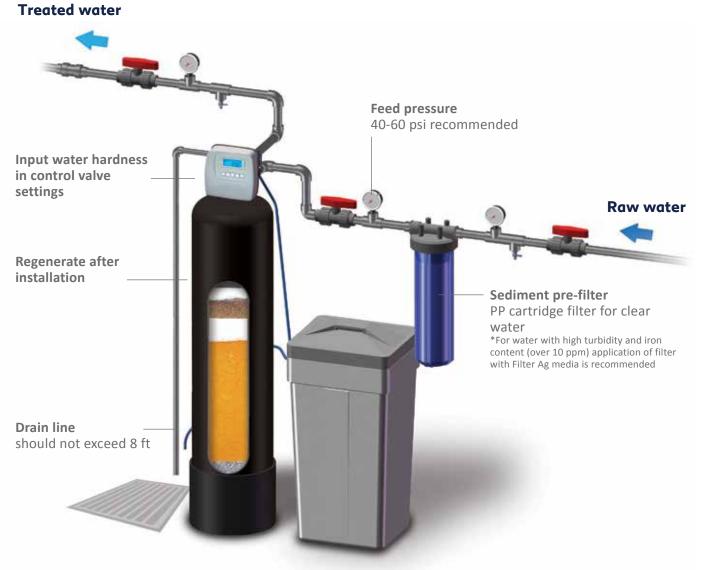

VOLUME CAPACITY OF ECOMIX® UNIT

Volume capacity can be calculated using just influent hardness and Ecomix system capacity.

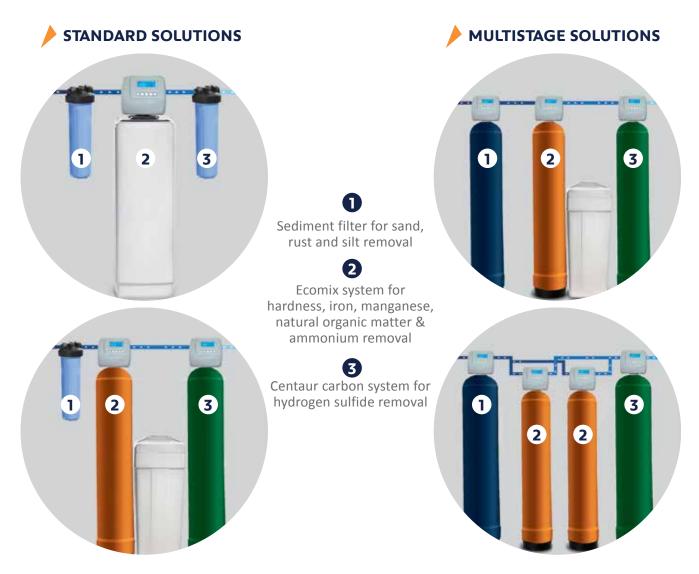

ECOMIX® INSTALLATION SCHEMATIC

ECOMIX® IN RESIDENTIAL ENVIRONMENT

ECOMIX® IN COMMERCIAL AND INDUSTRIAL APPLICATIONS

Ecomix[®] is used to treat raw water supplied to reverse osmosis systems, to soften and deiron boiler feed water, to purify domestic water in hotels, apartment buildings and business centers.

ECOMIX® PRODUCTION

Ecomix[®] is manufactured in Germany

Manufacturing process includes surface activation of FerroSorb and HumiSorb.

Digital control of ingredient mixing ensures consistent quality of finished product across batches.

Ecomix[®] is certified in EU for compliance with LFGB requirements for food-contacting materials by TÜV SÜD.

Ecomix[®] is certified in compliance with NSF/ANSI standards:

- NSF/ANSI 61 Drinking Water System Components – Health Effects
- NSF/ANSI 44 Residential Cation Exchange Water Softeners
- NSF/ANSI 372 Drinking Water System Components – Lead Content Scheme

ECOMIX® SUPREMACY

Most reliable technology for removal of iron and manganese Highest permissible concentration of iron and manganese Smallest regeneration salt requirement Consistent quality of purified water throughout the material's service life

Ecomix[®] is not only a unique water treatment technology. It has been a firm platform for the corporate success of numerous companies around the globe.

ECOMIX®

SIMPLE SOLUTION FOR 5 PROBLEMS

- hardness
- iron
- manganese
- natural organic matter
- ammonium
